### **[Summary]**

Nitto Denko has two group companies in Malaysia: Nitto Denko Electronics Malaysia (NIDEM) and Nitto Denko Materials Malaysia (NMM), both of which have a research and development center.

The NIDEM Research and Development Center was established in April 2002 and is engaged in product design for semiconductor encapsulation materials and customer spec-in activities. The NMM Research and Development Center, meanwhile, began activities in January 2004 in response to South Asian needs in the area of electronics-related adhesive tape products. The two centers together are referred to as the Nitto Denko Malaysia R&D Center.

The Nitto Denko Malaysia R&D Center occupies the same site as NIDEM and NMM in a prime industrial area of Shah Alam, capital of Selangor state. In order to respond rapidly

to customer needs and deliver new products in a timely fashion, we operate our trial production, evaluation, and other facilities on a 24-hour basis.

An environmentally adapted resin newly developed at the NIDEM research and development center has already been approved and adopted by customers and is contributing to Nitto Denko Group sales. At the NMM research and development center, meanwhile, a new development product has been completed in the area of electronic parts carrier tapes and has begun building a record of performance among customers in the Asian region.

The Nitto Denko Malaysia R&D Center will continue to respond sensitively to customer needs to swiftly develop and bring new products to market, working thus to improve corporate security and boost sales.
