Surface Protective Materials

E-MASK™•SPVTM•ELEP Masking Tape

Cautions for surface protective materials

<table>
<thead>
<tr>
<th>Cautions</th>
<th>Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>Storage</td>
<td>Avoid exposing the product to direct sunlight. Store it in locations with normal temperature. Be sure to store the surface protective materials within 40°C and starts after delivery.</td>
</tr>
<tr>
<td>Outdoor use</td>
<td>When using untreated substrates or in wet environments, choose weather-resistant surface protective materials.</td>
</tr>
<tr>
<td>Substrate</td>
<td>You may feel a sense of heaviness while peeling off the surface protective material of a coated substrate. This is due to the baking conditions of the protective material, or may be influenced by coated layers. Furthermore, uneven color may occur depending on the type of coating materials employed when vinyl chloride surface protective materials are used. Surface protective materials that are surface treated, such as metal treated substrates, may exhibit different peeling properties depending on the treatment conditions of the substrates.</td>
</tr>
<tr>
<td>Substrate</td>
<td>Substrate treatment for the surface protective material is performed after substrates are coated. The amount of it may be transferred to the surface of the substrate. This transfer can cause failure to occur when the substrates are painted, plated, etched, or bonded. Before using the substrate, adequately container conditions such as surface cleaning, surface preparation, and baking.</td>
</tr>
<tr>
<td>Laminating</td>
<td>The surface protective film on a substrate may float from the substrate at its ends over time even if the film is laminated with excessive tension thoroughly. Any matter that attaches to a substrate's surface, such as machining oil or dirt, may adversely affect the properties of its surface protection materials.</td>
</tr>
</tbody>
</table>

Request for confirmation using actual products

Before use, be sure to conduct working conditions using actual products.

Product warranty

- The product warranty period is six months after delivery of the product.
- The warranty covers product properties and quality, but does not cover all uses and processes.
- If any abnormality is found in the delivered product, it may be replaced with a new one or refunded to the extent of the money paid at the time of delivery.
- Before use, be sure to perform adequate verification and review before making a final judgment on whether the product is conformable or not.

Nitto’s SPV features our proprietary laminated structure created using highly sophisticated technologies that enable it to be used in a wide assortment of applications and environments.

Nitto’s products boast a wide scope of applications, ranging from surface protection of stainless steel, aluminum, decorative metal plates and other metal products to housing products, curing materials used in the automotive industry as well as for applications in the optoelectronics sector.

Nitto offers a wide variety of surface protective materials to meet your needs and demands. To select the surface protective material most suitable for the application and environment in which it is going to be used, detailed information corresponding to a particular function is required. Please refer to the “Basic functional requirements for surface protective materials” and “Criteria for selecting a surface protective material” below. Along with the information you obtain from these charts, please consult our staff at the nearest sales office for additional assistance and information.

**Selection Guidelines How to Select the Most Suitable Surface Protective Materials**

Nitto will continue to advance together with customers as a counseling center. "Sufficient adhesion and smooth peeling" Striving to meet the difficult challenge of satisfying these contradicting functions in one tape, TDOC responds to a diverse range of customers’ needs to protect products for various occasions and provides various value-added services to enhance customer satisfaction.

Surface Protective Materials for Electronics and Optical Products

**E-MASK™ RP Series**

Optical grade protective film with an antistatic property produced in a class 1000 clean environment

E-MASK RP Series for the surface protective of optical grade protective film with an artisitic property uses a polyester film as a base material and was produced in a class 1000 clean environment.

**Surface Protective Materials for Electronics and Optical Products**

Surface protective materials for electronics and optical products must be clean and must possess an antistatic function and easy peeling ability.

**E-MASK™ AW Series**

Surface protective material with good wettability and easier re-applicability

E-MASK AW-Series is made of polyether film-based surface protective materials and uses urethane adhesive with good wettability.

**E-MASK™ AW Series**

Surface protective material with good wettability and easier re-applicability

E-MASK AW-Series is made of polyether film-based surface protective materials and uses urethane adhesive with good wettability.

**Features**

- Superior transparency enables inspection of outer appearance of optical film without removing the tape.
- Offers good wettability for optical films and outstanding reapplication properties.
- Easy peeling. Suitable for large-size optical films (RP207).
- High resistance to dust on the backing and ease of wiping dust off (RP207).
- Backing printable with stamp or ink jet printer (RP207/ RP301).

**Structure**

**RP207**

- Easy removal of dust on the backing, printable backing
- Release liner
- Acrylic adhesive
- Polyester film
- Antistatic layer
- Printable dustproof layer

**RP301**

- Stable antistatic function, printable backing
- Release liner
- Acrylic adhesive
- Polyester film
- Antistatic layer
- Polyester film

Surface Protective Materials for Electronics and Optical Products

**E-MASK™ R Series**
Low contamination type developed for surface protection of optical parts
E-MASK R Series consists of polyethylene-based surface protective tapes developed utilizing proprietary adhesive synthesis technologies. This series is especially suitable for surface protection of LCD polarizing films, hard-coat or non-glare treated acrylic plates and polyester films during processing and transportation.

**Features**
- Minimal change in adhesive strength following application ensures easy peeling.
- Superior transparency enables inspection of the substrate surface condition without removing the tape.
- Good lamination for uneven surface such as anti-glare treatment.

**Applications**
- Surface protection for optical films such as polarizing films (during LCD shipment) and screen protection for mobile phones.
- Surface protection for optical films such as polarizing films (during LCD shipment) and lenses for mobile phones.

**E-MASK™ RB-S Series**
Surface protective tapes with an antistatic property that are ideal for applications that do not tolerate static electricity such as LCD panels
E-MASK RB-S Series is a surface protective tapes developed for optical films such as LCD polarizing film. Prevents static electricity produced and offers stable adhesion and easy peeling.

**Features**
- It has good initial lamination level and light peeling force.
- Minimal change in adhesive strength following application ensures easy peeling.
- Offers superior dustproofness when unwinding.

**Applications**
- Surface protective for optical films such as polarizing films (during LCD shipment)
- Applications that do not permit attraction of dust and dirt due to static electricity produced when applying or peeling the tape.

**E-MASK™ LS Series**
Single-sided optical grade anti-scattering protection tape
E-MASK LS Series is a single-sided constantly adhering sheet developed utilizing proprietary adhesive synthesis technology. Our product lineup uses a TAC/PET base material for each optical property.

**Features**
- Offers superior transparency.
- Suitable for application to glass or plastic plates such as polycarbonate plates.
- It has high lamination level.
- Produced in clean rooms.

**Applications**

Masking Tapes for Printed Circuit Boards

**ELEP Masking N-300**
Tapes for masking terminals during plating of printed circuit boards
ELEP Masking N-300 is a tape with a polyester film as a base material. Offering excellent chemical resistance and tight adhesion properties, ELEP Masking N-300 is used for masking terminals during the plating of printed circuit boards, mainly for preventing ingress of the painting solution.

**Structure**
- Acrylic adhesive
- Polyester film

**Features**
- Light unwinding and easy application.
- Special adhesive enables tight adhesion to the printed circuit board and tape does not peel or become misaligned during work processes.
- Utilizes even higher degree of tight adhesiveness when applied using heat and roller pressure.
- Offers excellent chemical resistance.
- Can withstand harsh usage conditions and leaves no adhesive residue.
- Minimal change in adhesive strength following application ensures easy peeling.

**Applications**
- Prevents ingress of plating solution during plating of printed circuit boards.

**General Properties**

**ELEP Masking N-380R**
Tapes for protective during soldering for mounting printed circuit board components
ELEP Masking N-380R is a protective masking tape with a polyvinyl chloride film carrier developed for masking during the plating of printed circuit boards. Offering excellent chemical resistance and very high adhesion, this masking tape is suitable for preventing contamination from the spray or hot vapor of plating solution.

**Structure**
- Acrylic adhesive
- Polyvinyl chloride film

**Features**
- Light unwinding and easy application.
- Special adhesive enables tight adhesion to the printed circuit board, and tape does not peel off or become misaligned during work processes.
- Utilizes even higher degree of tight adhesiveness when applied using heat and roller pressure.
- Offers excellent chemical resistance.
- Uses no silicon-based release coating, resulting in no slippage when layering.
- Minimal change in adhesive strength following application ensures easy peeling.

**Applications**
- For use during the soldering process when mounting components onto printed circuit boards, mainly preventing ingress of flux or soldering solution.

Stainless steel plate as the substrate.

**ELEP Masking N-700S**
Tapes for masking terminals on printed circuit boards during solder leveling process
ELEP Masking N-700S is a tape for masking featuring excellent resistance to solder and flux with superior adhesion. This tape is used for masking terminals during the solder leveling process on printed circuit boards.

**Structure**
- Natural rubber adhesive
- Crepe paper
- Polyolefin film

**Features**
- Light unwinding and easy application.
- Special adhesive enables tight adhesion to the printed circuit board and tape does not peel or become misaligned during work processes.
- Utilizes even higher degree of tight adhesiveness when applied using heat and roller pressure.
- Excellent soldering and reflex resistance and prevents ingress of solution.
- Can withstand harsh usage conditions and leaves no adhesive residue.
- Minimal change in adhesive strength following application ensures easy peeling.

**Applications**
- Prevents ingress of flux or soldering solution during solder leveling process on printed circuit boards.

**ELEP Masking N-800R**
Tapes for protective during soldering for mounting printed circuit board components
ELEP Masking N-800R is a crepe paper masking tape developed for use in the soldering process when mounting components onto printed circuit boards. This tape provides excellent solder and flux resistance in addition to strong adhesiveness, while permitting easy peeling after the soldering process and leaving almost no adhesive residue.

**Structure**
- Natural rubber adhesive
- Crepe paper

**Features**
- Light unwinding and easy application.
- Special adhesive enables tight adhesion to the printed circuit board and tape does not peel or become misaligned during work processes.
- Utilizes even higher degree of tight adhesiveness when applied using heat and roller pressure.
- Excellent soldering and reflex resistance and prevents ingress of solution.
- Can withstand harsh usage conditions and leaves no adhesive residue.

Stainless steel plate as the substrate.
Surface Protective Materials for Plastic Plates

Controlling adhesive strength in accordance with surface roughness while achieving well-balanced adhesion on substrates with partially different surface conditions are key requirements.

For embossed surfaces of plastic plates
SPVTM-J Series
SPVTM-V Series

For flat plastic plates
SPVTM-P Series

Used in the production process for home appliances, etc.

Product No. Thickness (mm) Adhesive strength (N/20mm) Tensile strength (N/20mm) Elongation (%) Weatherability (S-W-M(h))
J-200 0.045 0.25 35 500 20
J-300 0.45 0.90
J-400 0.90
J-500 1.20

SPVTM-J Series
Offers outstanding surface protective for printing, punching and transportation of plastic nameplates
SPV-J Series of polyolefin surface protective tapes was developed to provide effective surface protective for printing, punching and transportation of plastic nameplates.

Structure
Natural rubber adhesive
Polyolefin film
Release coating

Features
• Minimal change in adhesive strength following application ensures easy peeling.
• J Series has variety adhesive strength level. The product can adjust various surface roughness and process levels.
• Offers excellent initial adhesion and easy application. Film can be easily peeled and re-applied (manual application) when inspecting printed surfaces.
• Suitable for nameplate punching and molding processes.

Applications
Surface protective for printing, punching and transportation of plastic nameplates.

General Properties

Product No. Thickness (mm) Adhesive strength (N/20mm) Tensile strength (N/20mm) Elongation (%) Weatherability (S-W-M(h))
J-200 0.045 0.25 35 500 20
J-300 0.45
J-400 0.90
J-500 1.20

SPVTM-P Series
Low-adhesive material with superior transparency that do not contaminate surface of substrates
SPV-P Series was developed using Nitto’s proprietary multilayer film forming technology. Offers stable surface protective for cutting, punching, in-process transport and shipment for such substrates as PMMA (acrylic) plates, PC (polycarbonate) plates and LCD polarizing films.

Structure
Ethylene/polyvinyl acetate adhesive
Polyethylene film

Features
• Superior transparency enables inspection of the surface condition of the substrate without removing the tape.
• Low adhesion SPV-P Series is suitable for smooth surfaces.

Applications
Surface protective of plastic plates during transportation.

General Properties

Product No. Thickness (mm) Adhesive strength (N/20mm) Tensile strength (N/20mm) Elongation (%) Weatherability (S-W-M(h))
P-367K 0.060 0.05 20 200 50
P-366K 0.60 0.80

*Measured on acrylic plates.
Surface Protective Materials for Decorative Metal Plates

Several thousand types of decorative metal plates are used for household electronic appliances and construction materials. Controlling the strength of the adhesive according to the coating material and the surface grade is key to protecting the surface of decorative metal plates.

### SPV™-C Series

**Colored metal plate surface protective tapes**

SPV-C Series of surface protective tapes uses a polyethylene film as a base material, which is developed by utilizing Nitto’s proprietary technology. This Series offers superior protective for colored metal plates during transportation and processing.

**Structure**

- Acrylic adhesive
- Polyethylene film

**Features**

- Minimal change in adhesive strength following application ensures easy peeling.
- Superior transparency enables inspection of the surface condition of the substrate without removing the tape.
- Depending on the surface roughness and degree of processing, the most suitable product among a wide range of adhesive strength products can be used.
- SPV-C-6010 is particularly focus on environmental friendly since the product don’t use organic solvent in adhesive.

**Applications**

Surface protective of colored metal plates during transportation and processing.

**General Properties**

### SPV™-364 Series

**Polyolefin-based surface protective tapes suitable for decorative metal plates and nameplates**

SPV-364 Series of surface protective tapes uses a polyolefin film as a base material. This series is highly effective in protecting the surfaces of pre-coated steel plates and nameplates.

**Structure**

- Synthetic rubber adhesive
- Polyolefin film
- Release coating

**Features**

- Minimal change in adhesive strength following application ensures easy peeling.
- Outstanding re-application properties.
- Light unwinding and easy application.

**Applications**

Surface protective of pre-coated steel plates and nameplates during transportation and processing.

Before use, consideration should be given to proper usage upon ascertaining whether the product is suitable for the substrate (material to which SPV will be applied).*
Surface Protective Materials for Laser Processing

SPV™-AM-500/FG-3500
Surface protective tapes for metal plates. These products show excellent performance during the metal fabrication processes both in punching and bending. And good for bottom side protection during laser cutting. These products are protective tapes consisting of special carrier film and unique adhesive. They can also be used for punch press (NCT) process as well as laser-cutting process.

Features
- Prevents entrainment of metal chips which often occurs with thick-type surface protective tapes.
- Almost no emission of chlorine type of gas during incineration, such as gas from incineration of polyvinyl chloride films.
- Excellent film strength and bending processability during processing of metal plates.
- Minimize dross during laser cutting as bottom side protection.

Applications
- Surface protective for stainless steel and aluminum plates during transportation and processing.
- Suitable for bending work.

General Properties

Matters requiring attention during laser cutting
When using these products with laser processing, unpeeling can occur depending on the cutting conditions. However, processability can be enhanced by reviewing the following conditions:
1. Please sufficiently secure necessary adhesive strength. (Give only after leaving product in place for several days after application.)
2. Perform cutting at fast speeds. (Perform cutting at 0.003/m per minute or faster.)
3. Lower assist gas pressure.
4. Set a large gas nozzle diameter.
5. Shorten time from piercing to the start of cutting.
6. Lengthen distance from the piercing to the areas to be cut.
7. Using oxygen or flammable gases cause fire risk during laser cutting together with tape. Please consult with machine supplier about the conditions.

LASERGUARD (SPVTM-LG-4000/LG-4002/LG-5000/310GH5)
Metal Surface Protective Materials with Excellent Laser Processability
Nitto’s wide lineup offers total solutions for surface protective materials for laser cutting.

Features
- No need for film peeling-off work that was previously required before processing; this can lead to shortened working hours.
- SPV-LG-4002 (for CO2) and SPV-310GH5 (for both CO2 and fiber) are added to our product lineup as high-strength adhesive types designed with an emphasis on film peel-off prevention with assist gas.
- SPV-LG-4000 (for CO2) and SPV-LG-5000 (for both CO2 and fiber) are added to our product lineup as middle-strength adhesive types designed with an emphasis on light releaseability.
- No chlorine-based gas emissions during laser machining.
- Finer finishing by twice cutting pierced parts or cut sections.

Applications
- Suitable for bendable work.

General Properties

Structure
- Acrylic adhesive
- Special film
- Release coating

Features
- No chlorine-based gas emissions during laser machining.
- Excellent film strength and bending processability during processing of metal plates.
- Minimize dross during laser cutting as bottom side protection.

Applications
- Surface protective for stainless steel and aluminum plates during transportation and processing.
- Suitable for bendable work.

Surface Protective Materials for Metal Plates

**For Stainless Steel**
We offer surface protective materials suitable for use when processing substrates such as mirror-finished stainless steel, which cannot be repaired when marked with scratches.

**For Aluminum and Aluminum Sashes**
Exterior surface protective materials for various long and heavy building construction materials; durable and tough enough to prevent scratching caused by large shocks and feature weatherability enabling use during long construction periods.

---

**SPVTM-ME-4001**
Environment-friendly surface protective tapes suitable for bending

SPV-ME-4001 is environment-friendly surface protective tapes developed for stainless steel and other plates that do not use polyvinyl chloride as a base material. The bending processability of this product is superior to that of existing polyvinyl chloride surface protective tapes by using special polyethylene film as a base material.

**Structure**
- Synthetic rubber adhesive
- Special polyethylene film
- Release coating

**Features**
- Almost no chlorine type of gas from polyvinyl chloride films produced when incinerated.
- Excellent application throughout the year.
- Applicable for bending processability.

**Applications**
Surface protective for stainless steel and aluminum plates during transportation and processing.

**SPVTM-M-6020/M-6030**
Environment-friendly and water-based adhesive product for use with stainless steel and other metal plates

SPV-M-6020/M-6030 are water-based adhesive films developed for surface protective of stainless steel and other metal plates. Unlike conventional products, these environment-friendly films use no organic solvents during the adhesive manufacturing stage and also use polyethylene film as a base material.

**Structure**
- Acrylic adhesive
- Polyethylene film

**Features**
- Environment-friendly due to no organic solvents being used from the manufacturing stage.
- Easily peels off after use.
- Offers superior adhesion at low temperatures.
- Ideal for light processing.

**Applications**
Surface protective for stainless steel and aluminum plates during transportation and processing.

**Surface Protective Materials for Metal Plates**

**SPV™-A-6050/A-8050**

Environment-friendly product for aluminum sashes

SPV-A-6050/A-8050 are surface protective tapes that use a water-based adhesive. These environment-friendly products use a polyethylene film as a base material.

**Features**
- Offers superior adhesiveness to aluminum sashes.
- Easily peels off after use.
- Does not depend largely on surface roughness of substrate.
- Offers outstanding weatherability.

**Applications**
Surface protective of aluminum sashes, etc.

**SPV™-301/302**

Surface protective tapes feature excellent processability and weather resistance

SPV-301/302 are surface protective tapes for metal plates that use a polyethylene film as a base material. Providing excellent processability and weather resistance. These products prevent scratching of metal plate surfaces during processing and transportation.

**Features**
- Minimal change in adhesive strength following application ensures easy peeling.
- Excellent weatherability with little adhesive residue on the substrate.
- Capable of tracking during drawing and bending processes, thus preventing damage to metal surfaces.

**Applications**
Surface protective of stainless steel and aluminum plates during transportation and processing.

---

**Leveler Cleaning Sheet LCS-100**

**Easy metal dust cleaning of metal coil leveler line**

LCS-100 is a cleaning sheet for removing metal dust attached to metal leveler roll.

**Performance**
- Metal dust accumulates during leveler process
- Metal dust causes damage on plates
- Cleaning sheets catch metal dust

**Structure**
- Natural rubber-based adhesive
- PVC film

---

**SPV™-S-400X**

Surface protective tapes for deep drawing of stainless steel SPV-S-400X of surface protective tapes was developed for surface protective during stainless steel processing. Products can be selected in accordance with the shape from simple processing to complex processing.

**Features**
- Minimal film floating during drawing; multistep drawing is possible.

### Note
- The above chart shows examples of measured values, not guaranteed values.
- Thickness: Nominal thickness. Adhesive strength: Peeling angle 90°, Peeling speed 300mm/min. Tensile strength, elongation: Tensile speed 300mm/min.
