

Environmental Conservation Activities

Toward the Prevention of Global Warming (consolidated)

The Nitto Denko Group is working in unison to implement prevention of global warming. In order to reduce CO₂ generated from business activities, we are taking steps to raise efficiency of energy use, conserve energy and switch to fuels which produce less CO₂ emissions.

Unit CO₂ emissions (CO₂ emissions per ¥1 million of production output) in fiscal 2008 worsened 27% compared to fiscal 2007. Possible causes are operation energy for cleanrooms, which is independent of

production quantity, and worsening of operation efficiency due to intermittent operation of the production line.

On the other hand, in Europe where environmental conservation is aggressive, Nitto Europe NV in Belgium has switched all electric power into green energy since January 2009 and has accomplished a 1,500 metric ton reduction in CO₂ emissions. (Details are given on P.39.)

■ CO₂ Emissions by Source (consolidated)

Participating in Light Dimming Campaign

Beginning this fiscal year we have implemented an environmental awareness campaign, “Green Design Action” for employees of the Nitto Denko Group.

“Green Design”, meaning “design geared toward environmental conservation”, had been adopted as part of the Nitto Denko Group slogan for environmental action, “The Next Green Design”, and at this juncture we additionally incorporated it as the name of our environmental awareness campaign for offices as well as for individual employee’s lives, the aim of which is to “plan environmentally-considerate lives, conduct environmentally-considerate behavior”.

In previous campaigns each base had performed various creative activities appropriate to their varied environments and societies, but in order to foster an even stronger sense of unity as members of the Nitto Denko Group, we launched activities anew by collectively unifying the theme and period of implementation. We want to take the campaign to new heights. As the initial activity of the inaugural year, fiscal 2009, we implemented a project from June 20 to July 7 in synch with the light dimming campaign by the Ministry of the Environment, turning off the lights of our outside advertising displays and offices at our plants and business branches on June 21 and July 7.

Additionally, in the intention of carrying out light dimming in each employee’s home over the same period, we distributed candles to participating employees. The idea was to have employees reflect on the environment through the experience of spending time deprived of lighting as well as to give them a chance to enjoy an unusual night, an activity in which employees’ families graciously participated as well.
